

TILT & TURN WINDOWS

This ingenious design proves an excellent solution where cleaning the outside pane is required from within the room. It is also suitable as a means of escape in the event of a fire and so it is ideal in upstairs locations.

TILT AND TURN

Specifically engineered, the advanced gearing with up to eight locking points around the perimeter of the window ensures highly effective security and superb weather performance. The hinge and locking system enables the window to operate in two modes: A simple 45 degree rotation of the handle tilts the window into the ventilation position. A further 45 degree rotation allows the window to turn in for easy cleaning. For added safety, a special restrictor is fitted to eliminate the risk of the window being fully opened accidentally. Tilt and Turn windows are at home in both traditional and modern properties alike. With the facility to add a false transom bar to recreate the style of Sash & Case windows, they provide a sympathetic solution to flatted dwellings in many conservation areas.
